Continuation Sheet (PTO-303)

Application No. 10/796,487

Continuation of 3. NOTE: Applicant argues that Ohgita et al. does not disclose a running truck body. Ohgita discloses generally a truck body at reference character 11 having ends 39 which indicate rectangular. Although Ohgita does not disclose a method of manufacture, assuming Ohgita disclosed that four individual pieces were cut from a single rectangle and then welded together to form a single running truck body shaped in a rectangle Ohgita's running truck body runs horizontally along a track laid along an article storage section as recited in Claim 1. Applicant's change in shape affords no functional difference over the cited prior art. With respect to connecting at side surfaces, a side surface is bounded by an edge and because Ohgita's guiding poles 12 (or 40) attach widthwize to a running truck body, at some point the connect to a running truck body edge which is connected to a vertical side surface. With respect to claim 6, lines 11-13 it is unclear how a rope can connect to something, e.g. platform, while connecting in the vicinity of something. With respect to setting v. adjusting tension a weight will adjust tension based once placed on a rope and unless the weight is changed, this tension will not change. With respect to claim 11, Benjamin's front is a vertical flat side surface. Thus this reads on Claim 11.

With respect to claim 10 locating a control panel was not previously searched.
